REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The Applicant claims a fluid distribution assembly for use in a fuel cell comprising a separator plate having a major face, a boundary element disposed over the major face, and a flow field having a channel formed in the separator plate at the major face, the channel and boundary element defining a cross-sectional configuration which provides a water accumulation region along a length of the channel, the channel having sidewalls, an acute angle defined at interface between the sidewalls and boundary element, the width continuously decreasing along the depth of the channel in a direction generally away from the boundary element. Applicant claims a fuel cell comprising the above fluid distribution assembly.

In the prior art of record, Marchand et al., U.S. Pat. No. 6,649,297 B1, teach a fluid distribution assembly for use in a fuel cell comprising a separator plate having a major face, a boundary element over the major face, and a flow field having a channel formed in the separator plate, the channel and boundary element defining a cross-sectional configuration which provides a water accumulation region.

However, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a fluid distribution assembly for use in a fuel cell comprising an acute angle defined at interface between the sidewalls and boundary element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
